

# MetaSource User Administration for ApplicationXtender

Managing the complexities of security administration is one of the growing concerns in any business. In such demanding times, the availability of security management is considered paramount – affecting all sectors of an enterprise. The foundation of any security management is a model with role-based access control, enabling all the required functionality and authentication for a security system.

Now you can hand over the administration of users without handing over access to the actual applications in AppGen. MetaSource provides a web based User Administration for EMC ApplicationXtender for Premised Based and SaaS based deployments.

We utilize the EMC AppXtender Web CDK technology to seamlessly add user administration functionality. This provides you with user management functionality that results in faster development, faster revenue, more users, and the ability to serve your users better by engaging with them more efficiently.

## **SUPPORTED FUNCTIONALITY INCLUDES:**

- User Management
- Group Management
- AX Native & Windows Security Support
- Permissions
- Alternate Security Settings
- Document Level Security
- User Password Assignment
- Delegated Security Support
- Process ID Management
- MetaSource User
