

# Healthcare Provider Solutions

## YOUR ON-RAMP TO EMR & EHR

We feed your electronic medical/health (EMR/ EHR) system with our document scanning services. Taking this a step further, we can help you achieve peak operating efficiency from your staff with our mailroom outsourcing service and workflow automation software.

Example applications where you can save a lot of money:

- **Medical Records Scanning:** we will scan your backfile of patient charts, EKGs and X-rays so your staff can find them instantly with complete HIPAA compliance, and you can convert your file room into a new exam room and see more patients without moving your office
- **AP Automation:** we cut invoice processing costs by 80% on average
- **New Employee On-Boarding & Credentialing:** we help ensure that you receive all documents on-time, every time, and that you are always in compliance

## PAPER REMITTANCE PROCESSING

While electronic payments are widespread, it's a headache to process the remaining 20-30% that contain paper checks and explanations of benefits (EOBs). Outsourcing can be attractive, but many don't want the security risk of off-shoring remittance processing, and local banks offer "lockbox banking" but lack an ability to handle EOBs. What do you do?

We process remittances containing paper checks, EOBs and other correspondence – efficiently and cost-effectively – with a mix of mailroom and document scanning services combined with cutting-edge technology.

The Result: you get payments deposited on the same day they're received without any capital expenditure. You can also stay with your current bank, and implementation is complete in 30-45 days.
